	LAVENDULA VERA	ENGLISH LAVENDER	3	1 GAL
	SALVIA CLEVELANDII	CHAPARRAL SAGE	3	1 GAL
	PUBLIC STREET TREE			

STROLLING GARDEN

This design has an assortment of drought tolerant plant material. It is butterfly and hummingbird friendly, and the mulch top dressing and flagstone stepping stones help guide you through the garden. Occasional pruning will help maintain the shape of the plant material.

The unthirsty plants and organic mulch make this water efficient landscape while also adding curb appeal. This garden with a landscape area of 715 square feet requires about 6,760 gallons of irrigation water per year in the San Benito County area. A landscape of this same size with high water use plant material would require an additional 9,255 gallons of water.
